

# Canalwatch

2nd Quarter 2006 Newsletter ~ Environmental Resources Division ~ (239) 574-0745

## Please Welcome Our Newest Volunteers!!!

Alec Hart

Thomas McNamara

Joan DiBattista

Robert & Anne  
McGuire

Happy 4<sup>th</sup> of July!!!  
~ ERD Staff

Susan & Tony Porreca

Linda Redditt  
&  
Kenton Beal

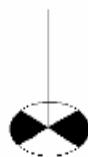

Newsletters now available by E-mail!

Thanks to Kraig Hankins for creating an electronic newsletter for Canalwatch!!!

Please write [fopatrny@capecoral.net](mailto:fopatrny@capecoral.net) if you would like to receive the Canalwatch newsletter by E-mail.

### Future Volunteers:

Jay Lagace (55A)  
Richard Jacobia (58G)  
Ray & Connie Wyant (83A)  
Frank & Karen DeLuca (74A)  
Ronald & Janice Place (70D)

### In This Issue...

- Page 2**      What Else... & **New** Volunteer Corner
- Page 3**      Data ~ April, May & June
- Page 4**      Events!

## What Else Can I Do To Help Protect The Waterfront?

By volunteering in Canalwatch you have already come to appreciate how fragile and beautiful Cape Coral's Canals can be. If you have ever wondered "What else can I do?" There is good news ahead. Here are some tips that are simple and effective at helping to improve water quality in the aquatic part of your yard:

- 1 Simply by changing what we do in our yards can show great improvements to the aquatic environment! Two of the most important Florida Yards & Neighborhoods Principles for a Canalwatch Volunteers are: Reducing Stormwater Runoff & Protecting the Waterfront.

**FACT:** One inch of rain on a 1000 SF of roof yields 625 gallons of water! Rain Barrels are a great way to collect some of this water. Not only does this give you free water, but it reduces stormwater runoff.

### Rain Barrel Workshop

July 29<sup>th</sup> at Rotary Park from 9:30-11:30am

To register call: Carol at (239) 461-7526

Cost: \$25.00 (includes a rain barrel and conversion kit)

\*class size is limited to 25 students. Future classes announced at: <http://lee.ifas.ufl.edu/fynmain.htm>

- 2 Re-create a **Natural Ecosystem** in your canal! The seawalls that line our canal system are foreign to nature. To enjoy the wading birds, fish, and other beautiful wildlife that call the canals home ~ give them, and yourself, a gift that will keep on giving ~ native vegetation. Planting in the aquatic part of your yard will create important habitat and food for wildlife while also improving water quality!

If you live on a **Salt water** canal you most likely have rip-rap, this helps to improve water flow and circulation. The red mangrove (*Rhizophora mangle*) typically lives closest to open water and can be planted in the rip-rap. The beauty, wildlife value, and erosion protection make mangroves an asset to salt water canals, not to mention they also help to reduce turbidity (water cloudiness).

**FACT:** Mangroves may be trimmed by the home owner within 50' of shore of their property when the mangrove height exceeds 6', but is not taller than 10' and the mangrove is not reduced in height below 6'.

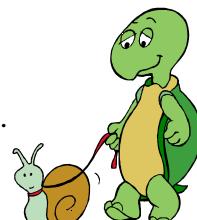

More information & the booklet, Mangrove Trimming Guidelines for Homeowners is available at <http://www.dep.state.fl.us/water/wetlands/mangroves/mangrove.htm>

If you live on a **Fresh water** canal there are numerous littoral plants that attract wildlife and help improve water quality by absorbing nutrients. Littoral plants are those found along a shoreline (not to be confused with submerged aquatic vegetation), and include such beauties as Blue Flag Iris (*Iris virginica*), Lizard's Tail (*Saururus cernuus*), Golden Canna Lily (*Canna flaccida*), and Duck Potato (*Sagittaria lancifolia*). Many pictures and descriptions are available at: <http://plants.ifas.ufl.edu> or please request the booklet Cape Coral Littoral Plant Guide from ERD. **Aquatic plants can be purchased at local nurseries!**

- 3 Join **Adopt-A-Canal**: Another great opportunity to protect & enhance Cape Coral's aquatic environments is by helping to remove trash, debris, & flotsam! If you are interested in helping please contact the Canalwatch Coordinator for more information.

- 4 Reduce Fertilize use. **Slow-Release Fertilizer** is best for coastal communities. These products have less potential to leach or runoff into our waterways than quick-release sources. When shopping

look for the amount of nitrogen that is "slow-release", the higher the percentage of slow-release, the less chance for leaching.

### Volunteer Corner

Here's something new ~ If you have any special announcements to share with other Canalwatch Volunteers I will post them here!

**Substitute Volunteer Needed** – Site 67C for next 6 months. Call (ERD) at 574-0745 to help!

**New Resident Environmental Education** packets now available. Call ERD at 574-0745.

**Adopt-A-Canal** needs volunteers! Please contact Janet at 574-0760 for more information!

If you would like more information or further assistance on any of the above tips please contact the Canalwatch Coordinator at [fopatrny@capecoral.net](mailto:fopatrny@capecoral.net) or call 574-0745!
